

Secure, flexible, mission critical high bandwidth services with an infrastructure that is future proof and offers an ROI of less than 5 years with a usable life span of 20 years

- ▶ **Pinpoint's Dark Fiber Network Solution** will provide secure, economical connectivity in the US and around the globe. The total cost of ownership of a dark fiber-based optical transmission system/network is far more economical than leasing telecommunications services over the terms of the existing contracts.

As bandwidth requirements increase, Pinpoint dark fiber provides the ability to upgrade bandwidth and service level options without increased monthly costs.

Pinpoint's Dark Fiber can provide a much more robust, instantaneous, on-demand bandwidth network for a lower cost than what is currently being provided by the existing telecommunications companies as well as augment the capacity and flexibility of their wide area networks (WAN).

▶ **Benefits**

- **SECURITY.**

Pinpoint's dark fiber routes are constructed in such a fashion that access can only be obtained at the end points opposed to a public network with multiple public access points.

- **ROUTE DIVERSITY.**

Pinpoint's dark fiber network is a fully redundant, Telecordia compliant fiber path fulfilling all US Military route diversity requirements.

- **SCALABILITY.**

Enterprise company owned transmission equipment determines how much bandwidth is available, not the telecommunications company. Pinpoint's solution gives the user the ability to upgrade from 1 Gb to 10 Gb or 800Gb by executing a software command in your equipment. No longer will the enterprise company be bound by the public telecommunications out-dated equipment and infrastructure.

- **MAINTENANCE.**

Pinpoint's network fiber has been placed within the last 8 years and utilizes the latest in fiber optic cable technology.

- **DELIVERY INTERVAL.**

Pinpoint's dark fiber network route is currently in place; only the entrances or laterals in most cases will need to be constructed positioning the dark fiber network with the highest probability of on time delivery.

About Pinpoint

Phone: 866.500.6924 • Web: www.pnptnetworks.com

Pinpoint Network Solutions is a Nebraska-based provider of telecommunications and data center services. Among our assets is a private, non-compromised local fiber-optic network for the Omaha area as well as regional fiber-optic networks linking Denver, Chicago, St. Louis, Memphis and New Orleans. Our local and national interconnection agreements for private line and Internet peering enable a global reach for unparalleled data speed, security and integrity. We serve major clients in the corporate, educational and government sectors, offering exceptional technical expertise and highly-customized solutions to meet individual needs. Our commitment to customer service ensures high system reliability, rapid response to problems, and innovative options and solutions. **Pinpoint Network Solutions. We're how opportunity connects.**
